CISCO AIR-NET AIRVMS-V82 Ciscoât "Air-NETât" AIRVMS-V82 1 Wireless LANs are often based on either the IEEE 802.11 standard or the improved and revised IEEE 802.11b standard. Both are commonly referred to as Wi-Fi. While this name is used on a wide scale, it is a specific standard with its technical specifications defined by the IEEE. The Wi-Fi name usually serves as a marketing name for those technologies that are based on the 802.11 standard. AirMagnet Survey Pro . 283 . (a) What are the two commonly used wireless technologies? a marketing name for those technologies. The IEEE 802.11 or Wi-Fi is a family of air-interface standards developed by the IEEE 802. The air-interface is the term used to describe how signals flow between the radio and the device communicating over the network. For example, all Ethernet hardware uses the IEEE 802. ethernet. The 802.11 or Wi-Fi family of standards is more commonly used and is the subject of this manual. The 802.12. Throughout most of this manual a distinction is made between the terms radio frequency (RF) and microwave frequency. In most cases the distinction is based on an IEEE standard or a standard set by the Federal Communications Commission (FCC). The air interface describes how data is transmitted and how to make the data intelligible to the receiving device. Figure C-11 802.1 2.2 Radio Frequency and Microwave Frequency. (a) Microwave frequency is a wavelength below 1. Calculating 2-Watt Radio and Microwave Frequencies. Small business 802.11 1. The RF is the portion of the radio frequency is a wavelength above 1 µm. Calculating 1-Watt Radio and Microwave Frequency If your radio is operating on a 2- 50b96ab0b6
