. . . clearmem - . . . Advanced Techniques and Strategies There are some special cases that should be noted here, namely low-end hardware that needs to be reflashed to Windows due to a watermark in bootloader. These are the most common mechanisms you are going to need: Step 1: Restart your computer and boot into Windows. Step 2: Plug in a USB-to-TTL adapter and connect it to the keyboard. Step 3: Open up the Device Manager. Step 4: Look for anything labeled "STANDARD DEVICE" under the "SYSTEM" section. It should look like this. Step 5: Right-click on this device, and click "Uninstall." Step 6: Do the same with any other similar device. Step 7: After that, click "File" > "Device Manager." Step 8: Click "Uninstall" under the Hardware-related section, and click "Modify" next to it. Step 9: Click "Additional Driver" Step 10: Search for the drivers you need to install and install them. Most of them are going to be hardware-specific, but here are some "everyday drivers." Step 11: After they finish, right-click on the green "DRIVER" button. Click "Update Driver." Step 12: In the software-related section, look for the Intel Desktop Board Drivers. Click "Update Driver." Step 13: After that, restart your computer. Step 14: Reboot to the BIOS and select your OS before the bootloader loads. If you are using a different OS, make sure that you disable the fastboot. Note: Some of the listed downloads are zipped archives, which can be opened in any archive program. They should have a ".zip" extension. If the archive is in other formats, use the zip command in the terminal. Step 15: Run the zipped archive in the archive program. Find the file "PK.inf" and the file "PK.sys" under the archive. Step 16: Run the files with the following commands in the terminal. Step 17: Open the utility you downloaded in step 1, 82157476af
